

IpNOVA SMS - Software for monitoring of received messages from SOT Server and SOT Server Mini

IPNOVA SECURITY SYSTEM

IpNOVA is complete security system for centralized monitoring using IP based networks for data transfer.

SECURITY SITE BOARDS

IpNOVA C2D, IpNOVA C6D, IpNOVA 8D, IpNOVA BOX connects security panels to IP network.

SERVERS

SotServer and SotServerMini receive messages from security site boards, process and redirect them to monitoring station.

MONITORING SOFTWARE

IpNOVA SMS is software which receive, process, visualize and store data received from SOT server.

IpNOVA SMS (Security Monitoring Software) is software for receiving, processing, visualising and storing data received from security sites. It has easy to use interface for working and processing received messages.

Features:

- No limit for the maximum managed security sites and messages received from them
- 10 levels of priority of the messages with different color and sound alert
- Full support of Ademco Contact ID protocol with option for change or enter of new event codes
- Arrange the messages according to their priority
- Manual input of events if needed
- Simultaneously process of events related with one security site
- Input from up to 4 serial ports
- SQL server which can work from the monitoring station itself or from other computer in the network
- Simultaneously work of more than one monitoring station with one SQL Server
- Option to search in the database with many different configurations
- Storage of detailed information for every security site
- Monitoring for failed test messages
- Visualization of security sites which is armed or disarmed, with missing test messages, unrecovered, with low battery
